Python, JavaScript, Java, HTML, CSS, MySQL
C, C++, php,

Internships

Prosaf Appzenith Software Solutions

1st - 30th Sept, 2021
Automation testing with selenium

Task:
did an intensive research on selenium modules and tested meta and Instagram website by automatically checking the elements functionality.

ATEU Softwares

19th Sept, 2021 - ongoing
Backend intern (MERN stack)

Task:
Team leader of three and worked on MERN stack application to connect to MongoDB and to upload and download image using axios.

Hobbies

Logo designing, reading books, rapping and listening to songs

Projects

ReactJs Pokemon game application

used create-react-app to create a Pokemon game using standard React conventions and passed props to render a series of Pokemon components.

Text to speech and translation System

used pyttsx3 module in python for text to speech functionality and googletrans module for language translation. Integrated both of the functionality to make one application using Tkinter GUI.

Project Management System

created a student mentoring system specifically for CS department of our college providing search with project code functionality and display of the projects accordingly.

Movie Review application

created an MERN application for storing movie title and movie review by users into MongoDB using Express and Mongoose.
